DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of group II, claims 1-8 in Paper No. 6 is acknowledged.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Kaltenbrunner et al., U.S. Patent 5,837,555.

Kaltenbrunner discloses a semiconductor apparatus as claimed. See **FIGS. 1-6** where

Kaltenbrunner teaches a reaction chamber for processing a substrate wafer,

comprising:

a wafer holder **100** for receiving the substrate wafer **10** to be processed;

a convection plate **110** disposed above said wafer holder, said convection plate suppressing convective movements over the substrate wafer;

a gas distributor plate (**60**, sidewall of chamber) disposed on a side face of the reaction chamber,

said gas distributor distributing process and purge gases which flow in; and

Art Unit: 2823

a flow plate (54, baffle) disposed on said gas distributor plate and extending substantially in a plane perpendicular to said gas distributor plate.

5. Pertaining to claim 2, Kaltenbrunner teaches the reaction chamber according to claim 1, wherein said flow plate is disposed approximately at a level of said convection plate on said gas distributor plate.

6. Pertaining to claim 3, Kaltenbrunner teaches the reaction chamber according to claim 2, wherein said flow plate extends right up to said convection plate.

7. Pertaining to claim 4, Kaltenbrunner teaches the reaction chamber according to claim 1, wherein said flow plate has a chamber-internal edge with a profile matched to a shape of said convection plate, in order to achieve a uniform distance between said convection plate and said flow plate (i.e., the convection plate and flow plate are flat).

Objections

8. Claims 5-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to W. David Coleman whose telephone number is 703-305-0004. The examiner can normally be reached on 9:00 AM-5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Olik Chaudhuri can be reached on 703-306-2794. The fax phone numbers for the
